**Note:**

When the AHU-KIT is matched with AHU, they can connect with VRF outdoor unit as VRF indoor unit. The connection is limited by the outdoor unit. There are three kinds of connection method:

### (1) Connection method 1: one-to-one

The AHU-KIT as below can adopt one-to-one connection method with VRF outdoor unit. Total capacity of AHU-KIT should be 50%~110% of that of outdoor unit.

## 2.18 Heat Storage Module

Model		XRZ180L/A-T	
power input	W	5	
current input	A	0.05	
Maximum fuse current	A	6	
Power supply		220-240V 1 phase ~50Hz/208-230V 1 phase ~60Hz	
Piping interface	Liquid pipe	Φ6.35	
	Gas pipe	Φ12.7	
Outline Dimensions (W×D×H)		730×450×220	
Net weight	kg	31.5	

Notes:

- ① According to the capacity of outdoor unit, the number of heat storage modules is calculated. After a heat storage module is full of heat, it can meet the requirements of one 18kw unit for once heat storage and defrosting. The total capacity of heat storage modules should be within 90%~150% of that of the outdoor unit.
- ② Model selection example: The capacity of an outdoor unit GMV-335WM/H-X is 33.5KW. According to the requirement that the capacity of the heat storage module should be 90%-150% of that of outdoor unit, the capacity of the heat storage module that can be matched with the outdoor unit is 30.15KW-50.25KW. If the capacity of a single heat storage module is 18KW, the outdoor unit should be equipped with two heat storage modules. The capacity of the two heat storage modules is 36KW, which meets the capacity requirement of the heat storage modules that can be matched with the outdoor unit.

## Notes:

- ① The circuit breaker and power cable specifications in the above table are selected according to the maximum unit power (maximum current).
- ② The power cable specifications in the table are obtained under the condition that the multi-copper core cable (such as YJV copper-core XLPE insulated power cable) is laid in the wire trough in an exposed manner (the ambient temperature is 40°C and the cable operating temperature is 90°C) (GB/T 16895.15). If the use condition is different, calculate and adjust the specification according to the corresponding national standard.
- ③ The circuit breaker specifications in the above table are obtained under the condition that the ambient temperature is 40°C when the circuit breaker is operating. If the use condition is different, calculate and adjust the specification according to the instructions on circuit breaker specifications.
- ④ A cut-off device is installed near the unit. The minimum space between levels of the cut-off device is 3 mm (it is required for both the indoor unit and outdoor unit).
